Work Experience

Techbridge India | *Software Developer*

Gurugram, In | Oct 2021 - Sept 2024

- **Spearheaded the architecture and full-stack development** of **tbXMS** (formerly tbDashboard), individually engineering and delivering **80%+ core system features** using the **MERN stack**.
- **Owned end-to-end backend infrastructure**, designing scalable **REST APIs** with **Node.js, Express.js**, implementing **authentication, authorization**, and optimizing performance of **MongoDB** databases.
- **Revamped frontend architecture** using **React.js, Redux**, building **high-performance, responsive UIs** that significantly improved **application stability** and overall user experience.
- **Directed deployment pipelines** across **7+ production environments**, establishing **release and rollback protocols** to minimize downtime and ensure **stable, zero-defect releases**.

Projects

RideFlow - Ride Booking Platform

GitHub | Live Demo

- Built a full-stack ride-booking app with **real-time location tracking** using **Google Maps API** and **Socket.io** for live driver-user communication
- Implemented **JWT-based authentication** with **protected routes** on both frontend and backend
- Managed application state with React Context API and persisted data using a Node.js/Express RESTful API with MongoDB persistence.
